Re: Oral Presentation Invitation
Cybersecurity Assessments for Maryland State Agencies
Request for Proposals (RFP) No. BPM052516

Dear Sandeep K. Tuteja:

In accordance with Section 4.8 of the RFP (Solicitation Number BPM052516), the Department of General Services, on behalf of the Maryland Department of Information Technology ("DoIT"), is inviting qualified or potentially qualified Offerors who have submitted Proposals in response to the RFP to participate in oral presentations/discussions/demonstrations.

You are invited to present an overview of your company, background information, and a summary of your technical offering. A lengthy presentation or "sales pitch" is neither necessary nor desired. The meeting will consist primarily of a brief overview, a question-and-answer period, and informal discussions as deemed necessary by the evaluation committee.

A maximum of 1.5 hours is allocated for your presentation, discussions, and demonstration of your proposed solution. The interviews will be held via Google Meet video conference.

Apr 1, 2026

09:00 am - 10:30 am
10:45 am - 12:15 pm
12:30 pm - 2:00 pm
3:00 pm - 4:30 pm

Apr 2, 2026

09:00 am - 10:30 am
10:45 am - 12:15 pm
12:30 pm - 2:00 pm
3:00 pm - 4:30 pm

To facilitate scheduling, please provide your top preferred date and time slot combinations within this window. Preferences should be listed in order of priority. Please return your preferences by **Friday, March 27, 2026, at 4:00 PM.**

During the oral presentation, discussions, and demonstration, each offeror should be prepared to address the following topics and specific questions related to each. These topics are provided at a minimum and do not represent the entirety of the subject matter that may be discussed:

I. **Overview of your company, background information, and a summary of your technical offering.** (maximum of 15 minutes allotted)

II. **Question and Answers.** In addition to providing your verbal answers, please provide a written copy of your answers to the following:

1. Please walk us through your end-to-end approach for conducting a statewide cybersecurity assessment. How do you prioritize, sequence, and execute activities across multiple agencies while ensuring consistency and scalability?

2. Describe your assessment methodology, including the frameworks and standards you will apply (e.g., NIST CSF). How do you ensure consistent, objective scoring (e.g., CMMI or maturity models) across agencies, and how do you identify and assess risks that fall outside standard control mappings?

3. How do you conduct assessments in environments with limited documentation, incomplete inventories, or conflicting evidence? What steps do you take to validate data accuracy and reconcile discrepancies?

4. What tools or GRC platforms do you use to manage assessment data and evidence, and how will you ensure compatibility and integration with the State's ServiceNow GRC platform, including reporting, dashboards, and historical tracking?

5. How do you ensure the accuracy, consistency, and quality of your assessment findings and deliverables, such as System Assessment Reports (SARs) and Plans of Action and Milestones (POA&Ms), to ensure they are actionable for agency remediation?

6. How do you maintain independence between assessment and remediation activities? If remediation guidance is provided, how do you ensure appropriate separation between advisory and assessment functions?

7. What is your approach to managing this effort across approximately 90 assessments, including scheduling, issue escalation, and engaging agencies that may be unresponsive or resistant?

8. Please describe a recent NIST CSF (or similar) assessment for an organization of comparable size and complexity. What challenges did you encounter, and how were they addressed?

9. Are the individuals presenting today the same personnel who will perform the work? If not, who will be assigned, what are their qualifications, and how will you ensure continuity and timely replacement of key personnel throughout the engagement?

10. If subcontractors are proposed, how will you manage and oversee their work to ensure consistency, quality, and accountability across all deliverables?

11. Beyond the core requirements, what additional value does your team bring to the State, including any economic, operational, or long-term cybersecurity benefits?

III. Demonstration of Cybersecurity Assessment Approach & Capabilities

(Must be a live/real-time demonstration)

1) **Assessment Methodology Execution** *(how assessments are executed)*
   Demonstrate how your solution and/or approach is used to plan, scope, and execute a cybersecurity assessment aligned with recognized frameworks (e.g., NIST CSF, NIST SP 800-53).
   a) How are assets, systems, and environments identified and prioritized?
   b) How are assessment criteria mapped to applicable standards?
2) **Data Collection & Integration**
   Demonstrate how assessment data is collected from multiple sources (e.g., automated tools, interviews, documentation reviews).
   a) How is data normalized and consolidated?
3) **Risk Identification & Analysis**
   Demonstrate how vulnerabilities, threats, and risks are identified, analyzed, and prioritized.
   a) How are risk scores determined?
   b) Can risks be mapped to business impact and critical services?
4) **Remediation Planning & Tracking**
   Demonstrate how your solution supports the development and tracking of remediation plans.
   a) How are corrective actions identified and assigned?
   b) Can progress be tracked over time?
   c) Are dependencies and risk reductions measurable?
5) **Workflow & Assessment Management** *(process structure)*
   Demonstrate how your solution supports the management of multiple assessments across agencies or business units.
   a) Can workflows vary by agency, system type, or risk level?
   b) Are there configurable templates or assessment profiles?
   c) Can requirements vary at different stages of the assessment lifecycle?
6) **Collaboration & Stakeholder Engagement** *(user interaction within the process)*
   Demonstrate how your solution facilitates collaboration among stakeholders.
   a) Can agencies provide input, upload evidence, and respond to findings?

b) Are notifications or task assignments automated?

7) **Compliance & Framework Alignment** *(multi-framework support & crosswalks)*
Demonstrate how your solution aligns assessment activities to applicable regulatory and compliance requirements.
   a) Can multiple frameworks be supported simultaneously?
   b) Can crosswalks between frameworks be generated?

8) **Reporting & Analytics**
Demonstrate both standard and ad hoc reporting capabilities.
   a) Can report templates be reused or shared across agencies?
   b) Can access to reports be role-based?
   c) Are trend analyses and statewide risk metrics available?
   d) Demonstrate how assessment results are documented and reported.
      i) Are reports standardized and customizable?
      ii) Can findings be tailored for technical vs. executive audiences?
      iii) Are dashboards available for real-time visibility?

9) **User Access & Security Controls**
Demonstrate how user access and roles are managed within the solution.
   a) Can users be grouped by agency or function?
   b) Can access to data and functionality be restricted by role?
   c) Are audit logs and user activity tracking available?

10) **Integration with ServiceNow**
Demonstrate how your solution integrates with Service Now
   a) Requires Resources on the State Side?
   b) Any custom code needed?

11) **Real-World Scenario Walkthrough (End-to-End)** *(Must be a live/real-time demonstration using a realistic sample scenario—not a slide presentation)*
Offerors shall demonstrate a cohesive, end-to-end cybersecurity assessment scenario illustrating how their solution supports the full assessment lifecycle in practice.
At a minimum, the demonstration shall include:
   A. Initiation of an assessment for a sample agency, system, or environment
   B. Progression through key stages of the assessment lifecycle, including:
      a. Intake and scoping
      b. Assessment execution
      c. Identification of findings
      d. Development of remediation actions
      e. Reporting of results
   C. Demonstration of how decisions are made within the solution, including:
      a. Prioritization of risks
      b. Assignment of remediation actions
      c. Movement between workflow stages

   D. Illustration of how users interact with the system throughout the process (e.g., assessors, agency representatives, administrators)

This scenario should focus on demonstrating continuity, usability, and integration of capabilities, rather than re-demonstrating individual features already covered in prior sections.

Please provide an appropriate number of attendees from your delivery team who are knowledgeable of and able to address all areas of the RFP and your Proposal. Key staff, intended to support the Cybersecurity Assessments contract, if awarded, should be present as needed.

Sincerely,

Joseph Kimaiga
Joseph Kimaiga
Procurement Officer
